1. Which key Cloud attribute represents a mapping from the application architecture to an appropriate production runtime architecture that is required to run the workload?
A.   Deployment model
B.   Governance model
C.   Strategic enterprise architecture
D.   Business and integration services for the application

2. Which of the following are methods to populate a Cloud directory services registry?
A.   Output encoding, secure logging, and validation APIs
B.   Network Scanner,Agent Scanner, and Code Security Scanner
C.   Cloud directory admin interface, bulk user load, and self-registration
D.   Cloud Access Security Brokers (CASB), Cloud Security Gateways (CSG), and endpoint protection services

3. Which statement describes transient virtual servers?
A.   They use local storage only and cannot be de-provisioned without prior notice
B.   They are available across all IBM Cloud data centers and are a low cost virtual compute option
C.   They are a good fit for mission critical, production workloads that host short-running processes
D.   They are de-provisioned on a first-on, first-off basis when other data center resources need to be reclaimed

4. What is "Continuous Delivery"?
A.   It is a practice by which one resolves build failures.
B.   It is a practice by which one implements application software coding.
C.   It is a practice by which one automates software code building and testing.
D.   It is a practice by which one can build and deploy software so that it can be released into production at any time.

5. Which IBM service helps kick-start the adoption of cloud native development?
A.   IBM App Launch
B.   IBM App Connect
C.   IBM Cloud App Service
D.   IBM Service Management solution

6. What are two of the components that make up IBM Mobile Foundation?
A.   BX CLI and MobileFirst Server
B.   Cloudant NoSQL DB and WAS Liberty
C.   API Management Server and Gateway Server
D.   MobileFirst CLI and client-side runtime components

7. What is Hyperledger Composer?
A.   The operational dashboard used by administrators.
B.   A tool that provides a simple UI to build Blockchain smart contracts and business networks.
C.   An Interactive Development Environment for designing web applications that use Blockchain.
D.   A program that allows database administrators to convert relational data into the internal format used by Blockchain.

8. Which two IBM Cloud services can be used with Watson Discovery to enhance the results of the ingestion process?
A.   Tone Analyzer
B.   Watson Machine Learning
C.   Watson Knowledge Studio
D.   Natural Language Classifier
E.   Natural Language Understanding

Answer Key below…

Answer Key:
1. A
2. C
3. D
4. D
5. C
6. D
7. B
8. C & E
